CARE AND CLEANING

Cleaning your machine daily. A clean well-kept machine is one of the best ways of advertising your products.

Use a mild soap and damp cloth to clean the exterior of the unit.

All utensils and insert bowls should be cleaned with a sanitizing solution to help prevent contamination from microorganisms.

Recommended cleaning procedure for main pump body.

- 1. Raise the pump assembly and lid out of the water tank. Operate pump to remove remainder of cheese.**
- 2. Place lower end of pump assembly in a bucket containing a mixture of hot water and liquid dish detergent. Operate pump until cheese product is expelled and water flows from discharge tube (approximately 10 pumps) “ DO NOT RECIRCULATE DIRTY WATER TO BUCKET!”**
- 3. Disassemble lid from pump assembly by loosening locking collar. You will now have the plunger, pump body and lid separate. Wash lid and all exterior surfaces of pump. Remove retaining pin from bottom of pump body to remove checkball. Use supplied tube brushes to clean pump body and discharge tube. NOTE: So as not to lose small parts, wash them in bucket filled with detergent water, not in a sink.**
- 4. Push the spring stop disc toward the knob and hold plunger rod; loosen knob counter-clockwise. Disassemble plunger assembly in order to wash all components.**
- 5. Rinse all parts with clean hot water.**
- 6. Using a bucket, sanitize all parts with 100**

PUMP PLUNGER ASSEMBLY

These parts must be assembled in this order.

The first time the pump is used after cleaning the pump will need primed. Push down on the pump to bottom of stroke and hold. Hold a napkin over end of spout with your finger and release the pump. The pump is now ready to use.

Do not leave out any parts of the pump, they are all important. The pump may not operate correctly with missing parts.
